

SECONDARY / / FUEL MODULE

PARTS LIST

- 1 Secondary Fuel Module
- 1 CAN link cable
- 1 Installation Guide
- 2 Velcro strips
- 1 Alcohol swab

2003-2016 Honda CBR600RR
2004-2016 Honda CBR1000RR

Installation Instructions

PLEASE READ ALL DIRECTIONS BEFORE STARTING INSTALLATION

Dynojet

2191 Mendenhall Drive North Las Vegas, NV 89081 (800) 992-4993 www.powercommander.com

These Pictures may differ from your model. These pictures are from the 2008-2011 CBR1000RR.

- 1 Remove the main seat and the passenger seat.
- 2 Remove the fuel tank cover.
- 3 Lift the fuel tank up or remove.
- 4 Mount the SFM in the tail section next to the PCV using the supplied Velcro. Make sure to clean both surfaces with the alcohol swab before attaching.
- 5 Plug the CAN link cable into one of the expansion ports of the SFM and the other end into one of the expansion ports of the PCV module (Fig. A).

It doesn't matter which ports you use.

You might also need to install a CAN termination plug into an empty port of the CAN bus if ALL devices in the PCV Device Network have a serial number starting with 14 or lower. If ANY device on the CAN bus (PCV, SFM, IM, or AT) has a serial number starting with 15 or higher, a CAN termination plug is NOT needed.

- 6 Route the SFM wiring harness forward down the left side of the bike.
- 7 Unplug the stock wiring harness from the UPPER fuel injectors (Fig. B).
- 8 Plug the SFM wiring harness in-line of the stock wiring harness and each fuel injector (Fig. C).

SFM harness:

ORANGE - cylinder #1

YELLOW - cylinder #2

GREEN - cylinder #3

BLUE - cylinder #4

- 9 2007-2016 CBR600RR / 2008-2016 CBR1000RR
- Attach the ground wire of the SFM to the stock common ground location underneath the fuel tank (Fig. D).
- 2003-2006 CBR600RR / 2004-2007 CBR1000RR
- Attach the ground wire of the SFM to the left side of the frame. There is a bracket to support the fairing. Go to this mounting bolt.

- 10 Reinstall fuel tank and bodywork.

There are two wires coming out of the SFM harness (near the enclosure) that will not be used unless you are also using the Ignition Module. Refer to the instructions of the Ignition Module for directions.

IMPORTANT NOTICE

The SFM and your PCV may need to be updated. The PCV and SFM need to both have the same firmware loaded and the most up to date version available (at least 0.1.10.6 or higher) installed. To install this firmware you also need to be using the latest PCV software version (1.0.6.4 or higher). The latest software and firmware can be found at: http://www.powercommander.com/powercommander/Downloads/powercommander_downloads.aspx?ProdType=PCV

To update your firmware go to Power Commander Tools -> Update Firmware. Click on the unit you wish to update (PCV Primary Module or Secondary Fuel Module) and then click on Update. This will bring up a window so that you can search the computer to find and open the firmware file. Open the file from the location on the computer where it has been saved.

The SFM needs to be added to the PCV network. To do so connect a USB cable to the PCV and another USB cable to the SFM. Open the PCV control center software and it will add the SFM to the network. You are now able to use the SFM.

The SFM is shipped in BASIC mode. This means that you will have 1 Fuel table in the software. This fuel table controls the lower set of injectors and upper set of injectors simultaneously. Whatever value is entered in a cell will automatically be put into the corresponding cell for the upper injectors.

If you put the SFM in ADVANCED mode you will have 2 Fuel tables. This allows a separate fuel table for the upper injectors, if desired.
