

Here is some information on what the FT ECU tuning kits consist of.

**FT Data link Kit**

**FT Data Link (USB)**

**Bike Side Harness**

The FT Data Link will be used when you are going to perform a flash. This will connect to your PC or laptop with the USB connector.

**FT Data Link (USB)**

On the other end of the Data link you will be able to connect to either the Bike Side Harness or Bench Harness. With the on bike harness you will soon have the live data feature available to tune like you would with a PCV or Bazzazz unit for tuning on the Dyno.

**Harness**

**Bike Side Harness**

**Bench**

With the Bench Flashing kit you access the same software; however this will not have live data. If you want to flash multiple bikes you will need to purchase one full kit of your choice. From there depending

on what kind of kit you choose you can then purchase either an additional Bike side Harness to then be used to flash the other bike. Or you can purchase the compatible Bench Harness to flash the other bikes.

**FT ECU Bench Flashing Kit**

**Bench Harness  
(USB)**

**Wall Mounted Power Supply**

**FT Data Link**
